

DERCUT DROPS

DERCUT drops are indicated for treatment of a wide variety of skin diseases including acne, psoriasis, eczema, herpes, herpes zoster, itching dermatitis, impetigo, carbuncles and furuncles. As a rule, skin disorders result from an internal systemic intoxication that overwhelms the different organs' excretion abilities. **DERCUT** drops support the body's inadequate defense mechanisms and excretion processes to stimulate healing. For example, pubescent acne is partially caused by the body's inability to metabolize and eliminate toxins via the intestines and urological tract.

Recommended dose: 15 drops 2x/day

Manufactures dose: 15-20 drops 3x/day
