HMF CANDIGEN PROBIOTIC SUPPOSITORIES

HMF Candigen provides two strains of *Lactobacillus* formulated for the support and maintenance of healthy microflora. Studies show that antibiotic therapy destroys normal microflora and suppresses the immune system, causing an increased incidence of bacterial, viral, and parasitic infections. **HMF Candigen** is recommended during and after use of antibiotics, oral contraceptives, steroids and hormone replacement therapy to replace normal microflora. For maximum benefits, **HMF Candigen** should be used along with **HMF Candigen Cream** when treating a vaginal yeast infection. Use one ovule per day at bedtime.

(Seroyal/Genestra products are only available through a licensed health care professional.)

Ingredients: EACH OVULE CONTAINS

- Probiotic Consortium 200 million CFU
 - Lactobacillus acidophilus* (CUL-60)
 - Lactobacillus gasseri* (CUL-09)
(formerly *Lactobacillus acidophilus*)
- Garlic (*Allium sativum*) Clove Powder. 2 mg
